

Abstract

This invention relates to a method for establishing a  
5 data link layer connection enabling data communication  
between a plurality of modules in a system connected to  
an I<sup>2</sup>C™-bus. The modules may be a mobile communication  
device such as a cell or mobile telephone, and  
peripherals such as a functional cover, a camera or the  
10 like. In addition, this invention relates to a data  
package configured according to the I<sup>2</sup>C™ specification  
and according to a data link layer protocol.
